

MUHAMMAD SAAD

Android Developer | Kotlin & Jetpack Compose

+92-311-1223381 | saadw7751@gmail.com | Github: github.com/chsaad-dev | LinkedIn: linkedin.com/in/muhammad-saad075

Portfolio: saadev.site | Location: Pakistan — Open to Remote / Relocation

PROFESSIONAL SUMMARY

Android Developer who builds and ships production-grade apps with Kotlin, Jetpack Compose, and MVVM architecture. Delivered 3 full-scale Android projects — a real-time donation platform, an offline-first expense tracker, and a live messaging app — using Firebase, Room Database, and secure role-based authentication to solve real-world problems at scale. Skilled at turning complex requirements into fast, reliable, user-ready products. Seeking an Android Developer Internship or Junior Android Developer role.

TECHNICAL SKILLS

Android: Kotlin, Jetpack Compose, MVVM Architecture, Android Studio, Material Design, Android SDK

Backend & Data: Firebase (Authentication, Firestore, Realtime Database, Cloud Storage, Cloud Messaging), Room Database, Offline-First Architecture

Tools: Git, REST APIs, Push Notifications

PROJECTS

GiveEase — Donation Platform Connecting Donors and NGOs

[Github: GiveEase](#) / [Download APK](#)

Final Year Project

Tech Stack: Kotlin, Firebase (Auth, Firestore, Cloud Storage, Cloud Messaging), MVVM

- Designed a role-based Firestore data model serving 3 user types (donors, NGOs, admins) from one codebase, enforcing access control via database-level security rules.
- Built a live impact dashboard using Firestore listeners on campaign and donation collections, letting donors see funding progress update instantly without refreshing.
- Structured authentication and campaign media handling through Firebase Authentication and Cloud Storage, keeping uploads reliable under concurrent multi-role activity.
- Added Firebase Cloud Messaging for milestone notifications, keeping donors engaged with NGOs beyond the initial donation.

SpendWise — Offline-First Expense Management App

[GitHub: SpendWise](#) / [Download APK](#)

Portfolio Project

Tech Stack: Kotlin, Jetpack Compose, Room Database, MVVM

- Chose Room Database over a network-dependent backend to guarantee full offline functionality, letting users log expenses anywhere without connectivity.
- Structured the codebase around MVVM to keep UI, logic, and data access independently testable, simplifying future feature additions.
- Optimized local read/write paths through Room, keeping transaction logging near-instant as the dataset grows.
- Built the UI in Jetpack Compose with Material Design conventions, minimizing taps needed to log a transaction.

GupShup — Real-Time Chat Application

[GitHub: GupShup](#) / [Download APK](#)

Portfolio Project

Tech Stack: Kotlin, Firebase (Firestore, Authentication, Notifications), Cloudflare Worker, Cloudinary

- Implemented real-time message sync via Firebase Realtime Database and Firestore, using listener-based updates so conversations sync instantly on both ends.
- Set up Firebase Authentication to handle registration, login, and persistent sessions across app restarts.
- Built a friend search and live status system on Firestore queries, rounding out a complete messaging experience beyond a bare chat prototype.
- Wired up push notifications for incoming messages, keeping users informed instantly even when the app is backgrounded.

EDUCATION

BS Software Engineering | COMSATS University Islamabad, Sahiwal Campus | 2022 – 2026

CGPA: 3.14 / 4.00

Relevant Coursework: Mobile Application Development, Data Structures & Algorithms, Database Systems, Object-Oriented Programming, Software Design & Architecture

CERTIFICATIONS

- Meta Android Application Development — Coursera
- Design Thinking for Innovation — University of Virginia (Coursera)
- Git Version Control — Coursera
